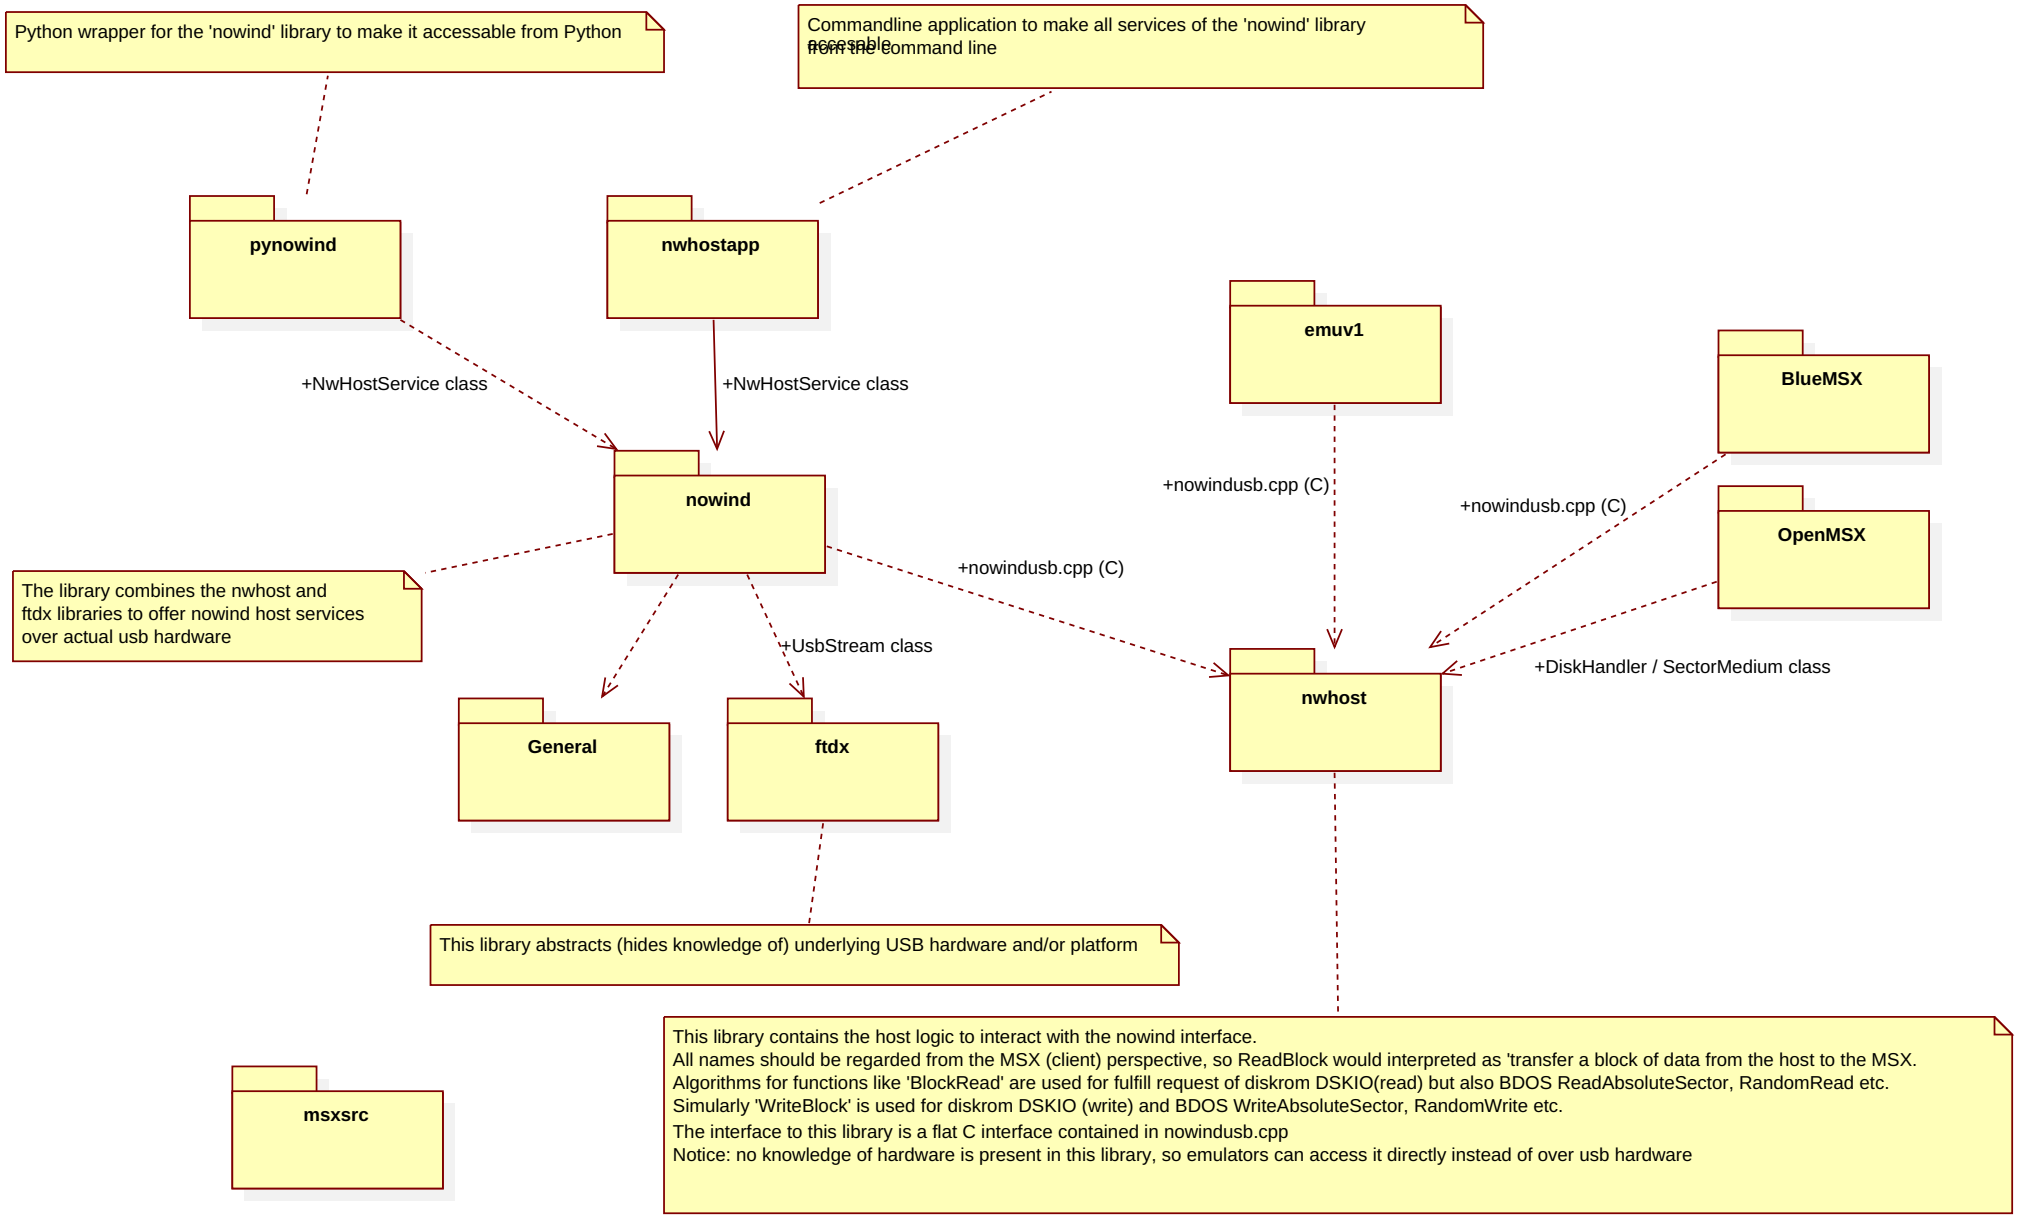
Design::overview



Design::nwhost library

todo: why does the nwhost known anything about partitions? A: because of the nowMap functions... not sure how to solve this neatly
todo:
- Remove response from NowindHostSupport, and add Reponse to BlockRead, WriteRead etc..
- Remove NowindHostSupport and NowindHostSupportDebug completely
- Remove NowindHostDebug and implement a log class that can be used to register a log-callback
